PCT/SE2005/000292

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	<u>1-3, 6-8</u>	YES
	Claims	<u>4-5, 9-12</u>	NO
Inventive step (IS)	Claims	<u></u>	YES
	Claims	<u>1-12</u>	NO
Industrial applicability (IA)	Claims	<u>1-12</u>	YES
	Claims	<u></u>	NO

2. Citations and explanations (Rule 70.7)

The following documents are considered relevant:

D1) Johansson B-L, "Preparation and characterization of prototypes for multimodal separation aimed for capture of positively charged biomolecules at high-salt conditions", 2003, vol 1016 page 35-49 Journal of Chromatography A.

D2) WO9710887

D3) EP0345649

D1 and D2 disclose a process for purifying antibodies using a multi-modal separation material which is a cation-exchange resin with aromatic ring systems where the ring-forming atoms can be carbon, sulphur or oxygen, see e.g. table 2, figure 3 of D1.

In D1, it is stated that the resin should be tested for capture proteins from different feedstocks.

Consequently, the subject matter of claims 1-3 and 6-8 is previously known and lacks novelty.

Document D2 is considered to represent the closest prior art. The invention according to claims 4-5 and 9-12 differs from the process in D2 in that the solution from a previous protein-A purification step uses a chromatographic resin with a multimodal ligand.

Consequently, with the background of D2, the problem solved by the present application is to design an alternative process to purify antibodies.

Continuation of: BOX V

The problem with leakage from protein-A columns is well known in the art. Moreover, it is common to combine protein-A chromatography with other chromatographic steps.

To solve the problem in D2 using another chromatographic step known to be used for antibody purification, such as the one in D1, seems to be obvious to a person skilled in the art in the absence of an unforeseeable advantage with the method used. Consequently, the invention according to claims 4-5 and 9-12 lacks an inventive step.

Claims 1-12 are considered industrially applicable.
